

Career Map

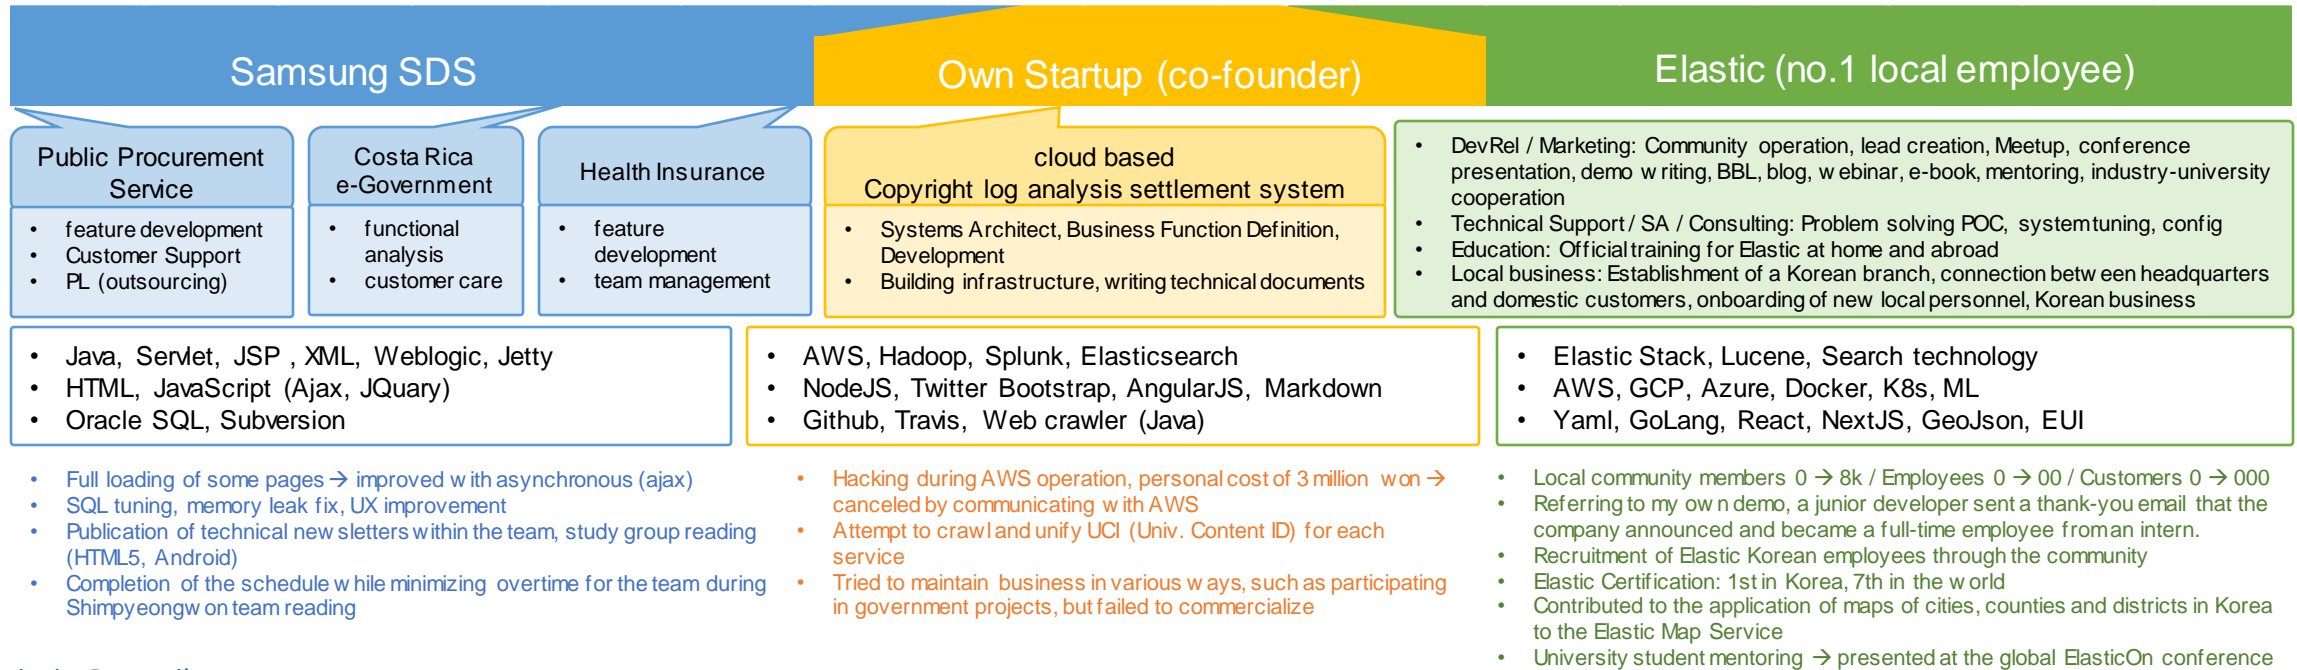

Individual / Community

year :

Company / organization

Skills and Abilities

language ability

Korean: mother tongue

English: available for work

- belonging to a global company
- Korean/English blog writing, translation
- Conference Presentations (Thailand, Japan)
- Technology training (Singapore, Hong Kong)

Russian: Basics / Survival

- Lived in Moscow for 3 years in his early teens

Personality / Relationships

Are analytical and tend to listen rather than lead conversations

Personality to promote persuasion and dispute resolution through understanding and empathy
Identification of the cause of the problem for the unreasonable situation

Diversity

I tend to be quiet in conversations with many people, but actively lead conversations in professional fields I know well.

Excellence in explaining and persuading new technologies/concepts that the other party does not understand

problem solving skills

He tends to enjoy solving difficult problems and is excellent at seeing the overall picture and thinking from a new point of view rather than facing the problem.

- Demand to write an analysis script that classifies @timestamp values by quarter → Separate new branch fields to save values and remove and use scripts → Logic simplification and performance improvement
- Instant demo request in an environment isolated from the outside → Data index by writing a bulk script using excel → Building and demonstrating a demo screen

Skills: Covered until recently, comparatively excellent

Elastic Stack

- Elasticsearch Query DSL, Painless Script
- Architecture conception, installation, cluster configuration, scale sizing, error detection, tuning
- Data mapping (schema) conception, data cleansing, cluster setup
- Logstash, Ingest Pipeline collection, conversion pipeline script
- Building a Kibana Visualization Dashboard
- Rest API / Json Data
- Proxy environment configuration using Nginx
- Issuing and setting up SSL encryption certificates
- Observability environment configuration, operation and analysis

Programming / Infra / Cloud Service

- NodeJS: Data conversion program, etc.
- AWS: S3 Static Pages Blogging – Hexo, Markdown Builds
- GCP: instance creation, network configuration, etc. with gcloud console commands
- Linux-based OS environment setting, use of package manager
- NodeJS-based environment setup and build such as npm and yarn
- Configuration to run as kibana service with PM2

Content Create / Documentation

- Blog / Technical Articles / Hands-on Lab Articles / Creating Example Datasets
- Conceive and implement a demo with an easy-to-understand story
- Various webinars and training videos – over 100 hours
- Habit of organizing necessary materials by category
- Use of various functions in spreadsheets (mostly used by Google Docs)

Communication / Training

- Opening and operating a community with 8,000 online subscriptions and 300 active users
- More than 500 domestic/overseas conference presentation experience
- Regular technical seminars and training, hands-on
- University student team project / technology / career mentoring

Skills: level that has been covered time ago or has only basic experience

Programming

- .Net / C# / Java, JSP, Spring, Servlet - Used at work 10 years ago
- GoLang, TypeScript – Development environment configuration, tutorial program development.
- Django / Python – Development of a wayfinding program for events at the PyCon booth

AI / Machine Learning

- Take Introduction to Neural Networks Online
- Understand concepts such as KNN, ANN, Text Embedding, Classification, and NER

Cloud / Container

- Concepts of Docker containers, images, etc. configuration build experience.
- Understand the concept of K8s Pods, how they work, etc.

Valuable Experiences and Achievements

Samsung SDS : Improvements voluntarily, not ordered

- Improving inefficient UX: drop-down selection → drag-and-drop
- Improvement of page reloading to asynchronous data loading using Ajax
- By redistributing/managing work according to ability and efficiency of each team member who was leading in a malicious project, testing was completed within schedule by minimizing overtime and weekend work.

Own Startup

- Independent development of necessary functions and tools: Admin function screen, web crawler
- AWS server hacked → Indemnity through communication with AWS

Elastic : Remote work / From zero / Self Motivation

- DevRel job experience since the days when there were almost no DevRel jobs
- Simultaneous performance of various duties such as DevRel / SA / Support / HR
- Involved in establishing a Korean community at zero, establishing a branch office, and recruiting local talent.
- Spreading company products, brands, and technologies by finding the right place. It spread to the extent that even people meeting for the first time put Elastic stickers on their laptops.
- Find prospective customers in Korea and connect them with our business team.
- Always find what you need from zero without the manager's instructions or the organization's big plan, and plan and execute → lead to performance (brand awareness, number of customers, sales growth)
- Product Feature Contribution – Elastic Map Service South Korea Map
- A large number of people who have been helped to get a job by created contents (blog, video)
- Introducing remote work and Silicon Valley corporate culture to domestic developers/students

Desired Organization, Job, Conditions

Prefer organizations that:
(It doesn't have to be 100%, but it's the best)

Growing organization

- Quick decision-making and execution

Horizontal Culture / Diversity

- All members can freely express their opinions
- Active communication and information exchange between members
- Calling by name + without title
- Respect for individual tastes and preferences
- A culture where you can freely collaborate with other teams even if it is not your own work
- Contribute to external communities

Tools support

- Services such as AWS and GCP (to a large extent) can be used autonomously
- We are not stingy in investing in equipment/programs that our members need.

working conditions

- Free commuting time adjustment / remote work
- Prefer Gangbuk area in Seoul (living in Goyang-si, Gyeonggi-do)

Globalized

- Opportunity to collaborate with overseas customers/partners
- Overseas work opportunities (except for some non-preferred countries)

Do not prefer organizations that:

- Opposite of what was mentioned above
- Cannot send messages directly to decision makers
- work attire is fixed
- Information is not shared with everyone
- If there is a site that is blocked from being accessed from the company network or payment device
- Meeting other employees in the same industry / not allowing private gatherings

I am interested in the following jobs
I prefer to do more than one job at the same time

DevRel : (Experience High | Preference High)

- Establish, manage, and support developer communities
- Building a developer culture within your organization
- Organizational product and technology branding and dissemination

Product Marketing / Technical Writer : (Exp. H | Pref. H)

- Create product demos / example stories
- User manual preparation / training such as hands-on

Product / Team Management : (Exp. M | Pref. M)

- Product function design / function specification / roadmap establishment
- Development Team / Project Progress Management

Infra / DevOps / SRE (Exp. Low | Pref. High)

- CI/CD tool operation and management
- Work process automation / product build, virtualization management
- Cloud Service (AWS, GCP, etc.) operation management
- Development of business tools (Slack App, Webhook API, etc.)

Search Service Development (Exp. H | Pref. M)

- Search strategy design / search engine construction
- Promote a better search experience for users

Data Engineer (Exp. H | Pref. M)

- Data ingestion pipeline configuration
- Data query/aggregation/visualization
- Derive insights → value creation

SA / Consulting / Support (Exp. H | Pref. L)

- Analyze customer problems and propose solutions through our products and technologies
- Preference Tuning / POC

Do not prefer jobs that:

- Working at a customer company and receiving instructions from a customer
- Tasks with unrealistic deadlines
- A job that only handles given tasks without coordination of opinions

It seems like a good fit for an organization like the one below

- Foreign companies entering Korea (Asia)
- Domestic companies expanding overseas
- A small-sized company where each member has to perform a variety of roles
- Companies that focus on open source products
- A company that has a close relationship with the community
- Enterprises using various cloud-based tools for their work

Requests and Agreements

Baseline

- Base salary above industry average
- 4 major insurances / basic working conditions such as annual leave

negotiable conditions

- Remote work / whether remote work is possible
- Company Location - Preferred North-West side Seoul (currently living in Goyang-si, Gyeonggi-do)
- Stock Option / RSU
- Flexible vacation
- Other Organizational Advantages
